In the News...

- The PCDC is building a comprehensive database of pediatric cancer patients and their outcomes. The database will be used to identify and track common patterns of cancer recurrence, improve treatment options, and guide future research. The database is expected to grow to include information on over 100,000 patients.

- The PCDC is collaborating with other global organizations to develop a standardized data dictionary. This dictionary will be used to ensure that all data collected is comparable and can be used for research across different institutions.

Disease Group Milestones

- The PCDC is currently working with seven disease groups, including soft tissue sarcoma, osteosarcoma, and bone tumors. Each group is developing their own data collection protocol and data dictionary.

- The PCDC is also working with researchers in the United States and Europe to develop new treatments and therapies for childhood cancer.

In the PCDC:

- The PCDC is hiring for several positions, including a Technical Project Manager, Sr. Clinical Data Standards Analyst, Semantic Engineer, and Full Stack Developer.

- The PCDC is also seeking volunteers to help with data entry and analysis.

PCDC Summer Reading List

- For fun, the PCDC team has shared their favorite books of the past year.

- The PCDC is also encouraging readers to check out the Children's Cancer Institute's website for more reading recommendations.

Thank You...

- The PCDC would like to thank all of the sponsors and donors who have made our work possible.

- The PCDC would also like to thank all of the researchers and clinicians who have contributed to our work.
